Programming, Psychology, economic

MOTIVATION LETTER

I began studying programming approximately one year ago. I was studying program languages for one year. At the same time, I took part in some web projects with my friends.

That was very helpful for me, to learn new things, and improve skills.

Programming is the only activity which consequences and also process gives me a big pleasure, I don't know other activity like this.

I love challenges and creating new things, it makes me happy, also I love learning new stuff, I think those help me to become one of the best programmer.

I like your company because of your attitude to employees: you help juniors to learn and develop their skills. So, I think it is a really good place for me.
